1. Green Mountain will purchase and retire renewable energy certificates representing the environmental attributes associated with the applicable amount of renewable energy produced from wind energy generation facilities in the U.S. You will not have electricity from a specific generation facility delivered directly to your service address, but your purchase ensures that renewable energy equal to 100% of your paid electricity usage is produced using renewable resources and delivered to the U.S. power grid on an annual basis. We may take up to three months following the close of the calendar year to make up any deficiency in the renewable resource content for your electricity product.

2. Carbon dioxide is a greenhouse gas that contributes to climate change. Nitrogen oxides (NO_x) contribute to ground-level ozone, or "smog," and sulfur dioxide and NO_x contribute to acid rain.

3. 0% of the total electricity supplied was purchased from other suppliers.
